

My only thought on this is that if the NAB were doing a good job XM radio probably would not have taken off like it has. The traffic and weather on XM far exceed what you can receive on the local channels in my area. I did not think I would ever be an XM fan but now that I have XM I find that it is the best way for portable entertainment. You can listen to what you want when you want and not have to listen to all the garbage that goes along with regular AM and FM stations. Maybe the AM and FM group should sell subscriptions and that way we would have to listen to less commercials and then they would be in the competitive market with XM. This is a great country of free enterprise and instead of complaining and trying to get rulings against the competition they should strive for further advancements to compete. Please do not allow the NAB get their way make them work to keep their market share. Reject petition 04-160. Thank you.
